

Statement on Responsible Sourcing of Minerals

Nexperia's products contain substances of mineral origin sourced globally. As a company committed to social responsibility, we strive to provide products manufactured from responsibly sourced materials.

Following Section 1502 of the US Dodd-Frank Wall Street Reform and Consumer Protection Act and Regulation (EU) 2017/821, *Conflict Minerals* refer to tin, tantalum, tungsten, and gold ("3TGs"). Nexperia exercises due diligence on the source and chain of custody of these metals in line with the OECD Due Diligence Guidance to ensure ethical and responsible sourcing.

The *Extended Minerals Reporting Template (EMRT)* applies the same due diligence principles and includes mica, cobalt, copper, nickel, lithium, and natural graphite. Mica and cobalt were added due to risks of child labor and unsafe working conditions in artisanal mining, while nickel, lithium, and graphite support reporting under the EU Battery Regulation. Copper strengthens RMI's ability to identify and engage facilities within these supply chains. Although not directly subject to the EU Battery Regulation, Nexperia supports customers' responsible sourcing requirements and applies due diligence to EMRT-relevant materials used in our products—specifically cobalt, copper, and nickel.

As a member of the Responsible Minerals Initiative (RMI), Nexperia adheres to RMI standards and the Responsible Minerals Assurance Process (RMAP), which align with the OECD Due Diligence Guidance and global regulatory frameworks. Our current *Conflict Minerals Reporting Template (CMRT)* and *Extended Minerals Reporting Template (EMRT)* are publicly available on [our website](#).

Nexperia's Supplier Code of Conduct requires all direct suppliers to adopt policies and perform due diligence regarding the origin and chain of custody of metals in supplied materials and products, and to ensure the same from their sub-suppliers. Suppliers must be able to demonstrate these measures upon request. If non-conformant smelters or refiners are identified, Nexperia will take all reasonable steps to ensure their removal from the supply chain.
